Ex No: 2

Learning and Assignment of IP Address manually to computers

Aim

To learn the concept of Ip addressing and assign Ip address manually to Computers in a network.

steps:

1. connect two or more Computers using an Ethernet cable or through a network switch
2. open Network settings on the Computer
3. Go to network adapter settings on the computer and select internet protocal version 4 (TCP/IPv4).
4. Choose use the following IP address
5. Assign a unique Ip address to each Computer.

   Computer 1: 192.168.1.1 Computer 2: 192.168.1.2
6. Set the same Subnet mask for all Computers: 255.255.255.0
7. Save the network setting.
8. open command prompt and use the ping Command to test connectivity Ex: ping 192.168.1.2
9. verify that the Computers can communicate with each other.

Input: Computer 1 Ip address: 192.168.1.1
Computer 2 Ip address: 192.168.1.2
Subnet mask: 255.255.255.0 Default gateway 192.168.1.254 ~~DNS~~ Server 8.8.8.8

Output: The ip address were successfully assigned manually to the computers & Connectivity between Computers was Successfully verified using the ping Command.

Dell 27/2/26
